

## INSIGHTS

### [Making Monitoring Pervasive](#)

Johnny Hatch, AHEAD  
Historically, monitoring has been something that could be manually deployed to a set of physical or virtual infrastructures, and once in place, you were good to go. Alerts and events would occur if something went wrong, and the monitoring tool would simply notify you with details about the incident. IT operations teams would nurse their infrastructure back to health, and all was good and right in the world again.

Fast-forward to today, however, and you'll find a much different situation...
